TEMPORARY CROWN PLACEMENT KIT | DP-136
 1 Crown Pliers + 20 Replacement Tips + 10g Adhesive Powder

Crown Pliers: designed to remove upper and lower crowns and bridges. An adjustable stopper allows to adjust the grasping tips to the width of the crown and locking into place. It will prevent any unwanted pressures to the crown avoiding potential damages. The double spring back action along with the hook-lock mechanism allows for a smooth grasping motion.

Polymer Plastic Replacement Tips: provide a perfect and safely grip for temporary ceramic crowns without damaging metal, resin, or ceramic surfaces. A better grip of the crown can be achieved if the tips are coated with the supplied adhesive powder which is dampened by saliva.

Adhesive Powder: denture adhesive used as "glue" for recementing crowns or bridges that have come off.

Arkansas: for routine sharpening and finishing.

India: for sharpening of excessively dull instruments or those requiring recontouring.

• *Arkansas:* a natural stone extracted from the Arkansas mountains. • *India:* a synthetic stone quarried from the finest Ozark novaculite - silicon quartz- deposits.

Ceramic Stone

Ceramic stones (autoclavable) are valued for their durability and the very keen edge they give in the finer grits. Will never pit or groove. Used for routine sharpening procedures.

Use only dry
(do not use with oil, water or lubricants)

76 x 25 x 6 mm / 3 x 1 x 1/4 in

Plastic Stick for sharpening test

A hard plastic stick used to test the blade of an instrument to determine the sharpness of an instrument. Must be used ALWAYS.

If the blade of the instrument runs smoothly over the plastic stick, then it is blunt. A sharp instrument will grab into the stick and removes small fragments of the plastic.

DB-15

Ø 7 x 75 mm / Ø 0.28 x 3 in

Lubricating & Sharpening Oil for surgical instruments

A non-coloured oil, which is an indispensable complement for lubricating and manual sharpening of surgical instruments. To activate the abrasive properties of Arkansas or India stones and to reduce the possibility of overheating the instruments during sharpening. It should be applied on all hinges or all other parts which are subject to movement or friction. Its use facilitates elimination of any residue present within the instrument hinges. Used to ensure perfect function and fluid movement of all surgical instruments.

Must ALWAYS be used during all sharpening operations.

CLEANLACT | Detergent Milk

Concentrated milk. Bacteriostatic detergent, rust inhibitor and lubricating action on all surgical instruments. It guarantees perfect maintenance by eliminating eventual stains, halos and browning due to sterilization, disinfection and washing with tap water.

Must be applied periodically, diluted or concentrated to extends your instrument's lifetime (view special instructions on packaging).

Cleaning Brushes

Special brushes (autoclavable) to clean surgical instruments. Used to remove eventual residue, organic or not, from all surgical instruments, in particular in angled, hinged and knurled parts, without damaging instrument surface.

Must be applied every time, for regular cleaning of all instrumentation and in the event that an instrument is exposed for an extended period to air before being immersed in the cleaning solution.

DB-11

Anti-Stain Rubber for metal

An abrasive eraser specially designed for surgical instruments to remove stains, halos or persistent burnishing from all surgical instruments without damaging the instrument surface.

Necessary when routine cleaning does not remove all stains.

MAINTENANCE

RINSE AND CLEAN

Immediately after surgery, rinse instruments under warm running water (not hot). Use only neutral detergent (pH=7).

ALWAYS SHARPEN YOUR INSTRUMENTS

Why? Surgical Instruments should be kept identical to their original design. Surgical procedures are most effective when using sharp instruments as they reduce hand and wrist fatigue, improve calculus removal, save time, improve tactile sensitivity, and minimize patient discomfort.

When? Instruments should be sharpened lightly after each use; there are two ways to evaluate whether the cutting edge is dull and requires sharpening:

- Visual:** The cutting edge should be inspected regularly in a good light (and if possible, under magnification). If the cutting edge is blunt it will be rounded and reflect the light. A dull, non-reflective line indicates sharpness.
- Teflon Test Stick (DB-15):** If the blade of the instrument runs smoothly over the testing stick, then it is blunt. A sharp instrument will grab into the stick and removes small fragments of the plastic.

How? The instruments should be sharpened following this procedure:

- Place one drop of sharpening oil (DB-OL) on the Arkansas sharpening stone. Lubrication improves the movement of the instrument blade over the stone; also, it prevents the metal particles from clogging the stone.
- Hold the instrument in one hand, while applying the stone to the lateral surface angled with the face of the blade.
- Position the stone to contact the heel of the blade and work toward the tip, keeping the stone in contact with the blade throughout the sharpening procedure.
- Move the stone up and down with short strokes, placing more pressure on the down stroke (do not move the instrument, keep the instrument still).
- Always finish instrument sharpening with a down stroke; this will prevent a rough edge from forming and remove any flash of metal.
- Evaluate the sharpness with teflon test stick (DB-15). If the blade is still dull, re-evaluate the angle of the stone and repeat the sharpening (steps 2-6).

*Sharp, delicate and TC instruments
Scissors, needle holders or bone forceps should be cleaned manually by using cleaning brushes.*

*Lubrication
Regular use of DB-OL lubricant oil and "Cleanlact" detergent milk, will prevent rust, corrosion, and stiff joints.*

*TC instruments
Tungsten carbide instruments are more sensitive to chemicals and require special care. They should never be exposed to chemical substances or to any other corrosive chemicals.*

*Sharpening
Regular sharpening will enhance the life of your cutter and will improve the quality of your work.*

*Ultrasound cleaning
It is not recommended for scissors, needle holders, bone forceps and all tungsten carbide instruments.*

ULTRASONIC CLEANING

It is recommended for regular instruments such as hand instruments and extraction forceps, following this procedure:

- Sort instruments carefully so as to include only instruments compatible with ultrasonic cleaning. Do not combine different metals (stainless, copper, chrome plated, etc.).
- Place instruments in open position. Make certain sharp edges are not touching other instruments.
- Change solution frequently to avoid accumulation of micro organisms.
- After rinsing and before sterilization, inspect and dry the instruments thoroughly.

⚠ Ultrasonic cleaning does not sterilize. Do not use for TC instruments, sharp and delicate instruments.

SHARPENING OF SCALERS AND CURETTES

Sickle Scaler Toe End: the sickle scaler has a pointed tip and, therefore, the stone is held straight as it nears the tip.

Curette Toe End: the curette has a rounded toe, so the position of the stone is adapted around the rounded cross-section.

⚠ Always finish instrument sharpening with a down stroke; this will prevent a rough edge from forming and remove any flash of metal.

CARE OF SHARPENING STONES

After use, wipe the stone with a clean cloth to remove metal particles. Then, clean the stone by scrubbing or using ultrasound to remove lubricant before sterilization. After sterilization, lubricate with DB-OL before each use.

⚠ Be sure to use entire stone to prevent "grooving".

STERILIZATION

Autoclave (Steam Sterilization)

Time and temperature: 15 min. 132°C (270°F) / 5 min. 135°C (275°F)

Chemiclave (Chemical Sterilization)

Time and temperature: 15 min. 132°C (270°F) / 5 min. 135°C (275°F)

Dry Heat Sterilization (not recommended)

Time and temperature: 90 min. 160°C (320°F) / 60 min. 170°C (340°F)

⚠ Sterilization cannot substitute cleaning.
